

VIU Summer School Critical Infrastructure Resilience

Alexander Cedergren
**Division of Risk Management
and Societal Safety**
Lund University, Sweden

Alexander Cedergren, PhD, is associate professor at the Division of Risk Management and Societal Safety at Lund University, Sweden. His main research interests involve studies of the management of risk and safety in settings involving multiple stakeholders, where these stakeholders have different roles and attach different meanings to the concept of risk. In particular, he is interested in the way that goal conflicts, negotiations and power relations among the different stakeholders influence the way risks are addressed, understood and managed. These questions have been studied in the context of Critical Infrastructures as well as in the public sector with regards to design and implementation of Risk and Vulnerability Assessments in a municipal context. Alexander is affiliated to Lund University Centre for Risk Assessment and Management (LUCRAM) and Lund University Centre for Critical Infrastructure Protection (CenCIP). In addition to his research activities, Alexander is involved in teaching and supervising students in the Master programme in Risk Management and Safety Engineering, the Master programme in Disaster Risk Management and Climate Change Adaptation, and the Bachelor programme in Fire Safety Engineering. Alexander is also the deputy programme director for the Risk Management and Safety Engineering programme and the Fire Safety Engineering programme.
