Venice International University
VIU Summer School
Critical Infrastructure Resilience
September 7 – 25, 2020 | Virtual edition

Schedule
Each module will be delivered from 12:00 to 3:00 pm on Mondays, Wednesdays and Fridays, from September 7 to September 25.

Only on Friday, September 18: two modules (M6 – M7) will be delivered from 10:00 am to 5:00 pm; the day is organized in cooperation and with the scientific support of Enel Foundation and its Open Africa Power Program.

All times given are in Central European Summer Time (UTC+2).

M1 – Definition & role of critical infrastructure
M2 – Cascading impacts & ranking criticality
M3 – RiskApp, cascading impact estimation
M4 – Cascading impact evaluation examples
M5 – Applied work
M6 – Sustainability in operations: the case for resiliency to enter the board room
M7 – Decision-making under uncertainty
M8 – Resilience tactical toolkit
M9 – CI Resilience solutions from infrastructure, business and agriculture
M10 – Applied work & Course Wrap-Up

Monday, September 7, 2020 | 12:00 pm
Module 1 – Definition and role of critical infrastructure
Erdem Ergin, Tor Vergata University of Rome

The first session will provide background information on critical infrastructure and resilience, with a look on the concepts behind them. The session will therefore include a discussion on the structural changes affecting our society as a whole and the drivers of risk. The session will then look at the challenges of building resilience and how critical infrastructure is a strategic entry point.

Wednesday, September 9, 2020 | 12:00 pm
Module 2 – Cascading impacts and ranking criticality
Jonas Johansson, Lund University

The second session will explore ways to understand the complexities involved with our society’s interconnected infrastructures and challenges related to addressing critical infrastructure resilience. It will share concrete case studies from events such as the European power blackout in 2006, the Eyjafjallajökull Volcanic Eruption in 2010, and the Hurricane Sandy in 2012 and the assessment of infrastructure resilience through empirical failure data. Based on these case
studies insights into the effect of interdependencies and cascading impacts are given, e.g. key characteristics to consider and geographical scale and temporal aspects of different types of critical infrastructures. It will further explore on various parameters to rank the importance of assets and infrastructures.

**Friday, September 11, 2020 | 12:00 pm**
**Module 3 – RiskApp, cascading impact estimation**
Federico Carturan, RiskApp

These two sessions will cover the methodologies currently used to perform a critical infrastructures risk assessment, in particular the literature sources suitable to get downtimes due to natural events will be reviewed, a methodology to collect the expert judgement used to adapt the data points from literature to specific infrastructures will be analyzed. Moreover, obtaining the correct hazard scenario is another key activity for a proper CI risk assessment, a survey of the best references for earthquakes, flooding, high temperature, sea level rise etc. will be presented. The general framework of a computational risk assessment will be presented and, subsequently, an interactive exercise of risk assessment will be conducted on a selected CI element using the aforementioned methodology.

**Wednesday, September 16, 2020 | 12:00 pm**
**Module 5 – Applied Work**
Erdem Ergin, Tor Vergata University of Rome

This session is an opportunity for participants to share their work and experience on critical infrastructure resilience. Participants will apply class material on selected work and experience. This will both put the class material to use and provide feedback to participants who want to share their work. Past editions have shown how the cumulative experience of participants is an asset and how we can use it to learn from each other.

**Friday, September 18, 2020 | 10:00 am**
**Module 6 – Sustainability in operations: the case for resiliency to enter the board room**
Carlo Papa, Enel Foundation
Giovanni Valtorta, e-distribuzione

After a snapshot of increasing hazardous phenomena and a brief analysis of the Sendai Framework for disaster risk reduction, students will focus their attention on 1-2 business cases related to Investment for resilience and effective response (specific target: infrastructures and networks).

**Friday, September 18, 2020 | 2:00 pm**
**Module 7 – Decision-making under uncertainty**
Carlo Giupponi, Università Ca’ Foscari Venezia

In this session the resilience concept will be applied in the context of how climate change can affect the performance of critical infrastructures and in particular to the case of flood risk in the design of airport infrastructures. A conceptual framework will be proposed, and operational solutions will be presented with a case study. Both quantitative and qualitative information are considered for the design of robust plans, i.e. plans that could be resilient to expected climate change impacts. Acquired information are managed in a multi-criteria analysis decision support system, making use of data mining techniques to identify preferable solution within a set of alternative ones.
**Monday, September 21, 2020 | 12:00 pm**

**Module 8 – Resilience tactical toolkit**  
Erdem Ergin, Tor Vergata University of Rome  
Crises are powerful agents of change. They can wipe out years of efforts, but they can also serve to accelerate positive change if dealt with properly. Past disaster experience indicate that decision-making is the single most important factor for building resilience through crises. This session will present a resilience tactical toolkit based on a timeline guiding decisions in crisis, recovery and normal phases. It has been already deployed and tested and is being further refined for different users such as business associations, professional chambers, universities, and municipalities.

---

**Wednesday, September 23, 2020 | 12:00 pm**

**Module 9 – CI Resilience solutions from infrastructure, business and agriculture**  
Louis Boutaud de la Combe, Business Coach  
This session will discuss the application of critical infrastructure thinking to 3 different sectors by sharing and discussing findings of 3 ongoing studies: (1) critical infrastructure risk assessment for logistics and energy at regional level, to improve investment planning, (2) lifeline utility business continuity planning in an Organized Industrial Zone, and (3) key agricultural product risk assessment. They illustrate the application of CI resilience, together with the design process, the stakeholder mapping and the findings.

---

**Friday, September 25, 2020 | 12:00 pm**

**Module 10 – Applied Work & Wrap up**  
Erdem Ergin, Tor Vergata University of Rome  
This session is an opportunity for participants to share their work and experience on critical infrastructure resilience. Participants will apply class material on selected work and experience. This will both put the class material to use and provide feedback to participants who want to share their work. Past editions have shown how the cumulative experience of participants is an asset and how we can use it to learn from each other.
